Score: 95

Comments

This was perhaps the most engaging of all the presentations. It was done just like a retrospective. The"just talking"• style was greatly appreciated. The review panel (the teaching team) thought it was a refreshing video. This may be the best voice track of all the presentations.

The presentation gave a feeling that the team exhibited a strong sense of team and mutual respect. Nice job.

Overall, the presentation covered all the points. The challenge for the audience was following the points and seeing the supporting data. Some charts would have helped provide evidence to support the claims being made. I feel like I should have a deck in my hands as you are talking through the presentation. [Or, you could have said to check out a particular jira or sonarqube report.] For example, the discussion of code quality was missing actual support. While the presentation asserts the team hit the mark, what would be better would be to show the sonarqube report showing coverage, smells, and so forth.

The system set-up video is solid. The use of the command line (versus an IDE) was spot on.

The system demo is solid. Nice job.
